EXECUTIVE SUMMARY

Senior full-stack engineer with 7+ years of experience designing, building, and shipping production-grade web applications. Deep hands-on expertise across the entire stack — Node.js, React, TypeScript, GraphQL, Ruby on Rails, and cloud infrastructure — with a strong track record of end-to-end feature ownership from scoping through deployment. Experienced in mentoring engineers, collaborating closely with product and stakeholders, and driving technical decisions that move the needle on both engineering quality and business outcomes. Hands-on builder of AI-powered products, including a production multi-channel AI customer service platform, and an advocate for AI-assisted development workflows that accelerate team velocity.

CORE COMPETENCIES

Full-Stack Development: Node.js, React, TypeScript, GraphQL, Ruby on Rails, HTML/CSS, REST & GraphQL API design

AI & Emerging Tech: End-to-end AI product development, Prompt engineering, LLM & agent architecture, Multi-channel AI deployment, AI-assisted dev workflows (Copilot, Claude)

Engineering Practice: End-to-end feature ownership, Code review & mentorship, Architecture & system design, Agile sprint facilitation, CI/CD pipeline management

Data & Infrastructure: PostgreSQL, MongoDB, SQL, AWS, Google Cloud, CircleCI, Heroku, Version control (Git/GitHub)

Collaboration & Product: Stakeholder & product team partnership, Feature scoping & roadmapping, Third-party API integrations, Cross-functional delivery

EXPERIENCE

Bond Vet *New York, NY | Veterinary Clinic Network; PE Backed; 50+ clinics in 5+ states*

Staff Engineer *(Remote) | May 2025 – Present*

- Own end-to-end development of full-stack features across the stack — scoping with product and stakeholders, architecting solutions, writing and reviewing code, and owning deployment and post-launch iteration.
- Designed and currently maintains a production multi-channel AI customer service platform: architected agent workflows and knowledge base, engineered GraphQL APIs to connect the AI agent to live operational data, and owned prompt engineering, flow design, and ongoing iteration. Delivered 50% faster response times, 10% higher conversion, and 20% reduction in operational costs.
- Mentor and manage engineers on the team; conduct design reviews, establish technical standards, and support junior engineers through pairing, code review, and architectural guidance.
- Manage and improve CI/CD pipelines using CircleCI, championing deployment reliability, test coverage, and engineering velocity.
- Embed AI coding tools (LLMs, code review assistants) into team development workflows, accelerating throughput and improving code quality across the engineering org.
- Collaborate directly with product managers and business stakeholders to scope, prioritize, and deliver high-impact features — translating business requirements into clean, maintainable technical solutions.
- Contribute to sprint grooming, architectural decisions, and cross-team technical prioritization as a senior technical voice in the eng org.

Senior Full-Stack Engineer *(Hybrid)* | *September 2023 – May 2025*

- Influenced technical planning at the product and architecture level; served as a key voice in engineering strategy and sprint execution.
- Led end-to-end implementation of client-facing messaging platforms, improving client communication efficiency by 30%.
- Built reusable internal code libraries that accelerated feature delivery velocity across multiple product lines.
- Partnered closely with product managers and non-technical stakeholders to translate business requirements into clean, well-scoped technical solutions.

Full-Stack Engineer *(Hybrid)* | *April 2022 – September 2023*

- Built and shipped features across client-facing and internal applications using Node.js, GraphQL, React, and TypeScript — owning development from ticket to production.
- Developed internal reporting and analytics tooling that supported operational and financial decision-making.
- Identified and implemented agile process improvements that increased team throughput and scoping accuracy.

Milo Pets *New York, NY | Software: Modern PMS for Veterinary Practices*
Full-Stack Engineer | *November 2019 – March 2022*

- Served as the integrations-focused engineer on a Rails/React application at a fast-moving early-stage startup, owning the design, build, and maintenance of the company's third-party API integration layer.
- Architected and implemented integrations with external APIs across payments, logistics, communications, and data providers — enabling core operational workflows and business reporting capabilities.
- Collaborated with founders and cross-functional partners to define integration requirements, scope technical solutions, and deliver new product features end-to-end.
- Maintained reliability and observability of integrations in production, debugging failures, handling versioning changes from external providers, and implementing resilient error-handling patterns.

Chelsea Piers *New York, NY*
Project Manager & Regional Director | *2018 – 2019*

Bank of America Merrill Lynch *New York, NY*
FX Interest Rate Derivative Trader & Analyst | *2017 – 2018*

U.S. Air Force Research Lab *Rome, NY*
Civilian Computer Scientist | *2014 – 2017*

OTHER EXPERIENCE

Knight's Bike Shop *Kalamazoo, MI*
Founder, Operations Lead *September 2024 – Present*

- Co-own a brick-and-mortar retail bicycle shop; set up and systematized all back-office operations — compliance, payroll, financials, and vendor processes — enabling the business runs with minimal ongoing oversight.
- Maintains an oversight role while the other co-owner manages the store and staff day-to-day.
